课堂测验

时序逻辑电路 (答案)

1. 计数长度 M=12。

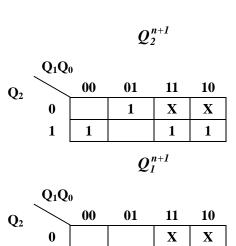

2. M=13 减法计数器 DCBA=0000, \overline{G} =0,M=1。 $Q_DQ_CQ_BQ_A$ =0011作为译码信号。

3.
$$Z = Q_2 \overline{Q_1} Q_0$$
, $\begin{cases} J_2 = \underline{Q_0} \\ K_2 = \overline{Q_1 + \overline{Q_0}} \end{cases}$, $\begin{cases} J_1 = Q_2 \overline{Q_0} \\ K_1 = \overline{Q_0} \end{cases}$, $\begin{cases} J_0 = 1 \\ K_0 = 1 \end{cases}$

自启动检查: $010 \rightarrow 001$ $011 \rightarrow 110$

	Q_1Q_0						
\mathbf{Q}_2		00	01	11	10		
C2	0	001	100	X	X		
	1	111	000/1	110	101		

		\mathcal{Q}_o^{n+I}						
\mathbf{Q}_2	Q ₁ Q ₀	00	01	11	10			
C 2	0	1		X	X			
	1	1			1			

4.
$$CP_{FF_0} = CP$$
 , $CP_{FF_1} = \overline{Q_0}$, $CP_{FF_2} = Q_0$

异步设计法应通过时序图来合理选择并确定各触发器的时钟方程。
